

#### ADVICE

- Dust, heat, sun, cigarette smoke, cleaners, ventilation, type of marker, temperature of markerse and different colours of markers can affect the performance of this board. Use a brush specifically made for white boards.

#### USE

- **Use only dry erase markers.** Do not use permanent type markers. If you are using water base soluble markers, wait until ink is totally dry before erasing or staining may result.

#### CLEANING

- We recommend that the board be cleaned off at the end of each day. If this is not possible and erasing difficulty results, marks may be simply removed by using a White Board Cleaner, an ammonia based cleaner, or mild soap. If stain stays on surface, go over it again with the same colour marker. The solvent in the ink will lift the stain without damaging the board surface.
